Current role	Fullstack Developer at Docket Inc
Experience	Internal tools, Ticketing, Legal, B2B
Technologies	PHP, AWS, Docker, jQuery, MySQL

## At work I'm best at...

Prioritising user experience. I'm always thinking about how our end users will interact with our app and I have a sharp eye for details that make their time in our software just that little bit better.

## Work experience

### Fullstack Developer, Docket Inc

Aug 2021 – Present (1y 6m)

Provides legal matter tracking software for lawyers.  
Internal tools · Ticketing · Legal · B2B

PHP   AWS   Docker   jQuery   MySQL

- Started as an entry-level developer, but quickly progressed to solo projects like building a user customizable dashboard.
- Spearheaded frontend development projects, significantly improving the user experience on the platform
- Developed features requested by the sales team, e.g. ticket filtering and kanban, to better serve the needs of the clients.
- Solely handled the frontend of a brand new Svelte app, designing every UI component from scratch.

## Education

### Clubhou.se

Apr 2021 – Aug 2021 (4m)

Bootcamp Web Development

## Snippets

### jFilter - jQuery filtering plugin @ [github.com](#)

One of the first things I did at Docket was introduce a filtering system so users can see all their tickets in an organized way. I developed it gradually the whole time, and eventually decided to make it agnostic to Docket for anybody to use it. I'm particularly proud of the coloring system; each of the filter's categories becomes bright and colorful when that category is filtered, and all currently active filters are displayed below and organized by color, so you always know what's being filtered at a glance.

### LastFM Delete Scrobbles Extension @ [github.com](#)

One day, I let someone use my Spotify account, only to realize I suddenly had thousands of songs completely foreign to me in my LastFM history. This bothered me (for some reason) enough to try deleting them one by one, but then realized how silly that was and made a whole Chrome extension to do it for me.

## More about me

### I want to work for a company that...

Works remotely and asynchronously. My productivity writing code comes in bursts and I don't want to sit all day at a desk being unproductive when I end up doing a lot of my best work at 2am.

### In my next role I'd like to learn...

Newer js frameworks. My previous role used alot of vanilla JS and jQuery and I'm excited by the changes made in modern frameworks that allow for easier creation of larger webapps.

### At work I'm best at...

Prioritising user experience. I'm always thinking about how our end users will interact with our app and I have a sharp eye for details that make thei time in our software just that little bit better.

### Interests

Building Lego, Geocaching, and Whittling/Woodworking
